

Unilabs

HISTOLOGY USER MANUAL

Unilabs

Histology User Manual

Introduction

This handbook is intended to serve as a user guide to the services available from the Unilabs Histology Laboratory based at Stephenson Way, London. It is aimed for use by all staff groups involved with requesting Histological investigations.

About Us

Unilabs Histology Laboratory is an UKAS accredited medical laboratory (No. 9344); accredited to ISO15189:2012 for the scope described in the UKAS Schedule of Accreditation which can be found on the UKAS website: <https://www.ukas.com/find-an-organisation/>

Users of the Histopathology service should refer to the UKAS schedule of accreditation for a list of currently accredited tests. (No 9344):

https://www.ukas.com/wp-content/uploads/schedule_uploads/00007/9344-Medical-Multiple.pdf

We provide a wide spectrum of tests for both Histopathology and Immunohistochemistry with rapid turnaround times.

Histology tests include:

- Interpretive microscopy
- Special stains
- Frozen sections
- MOHS

Immunohistochemistry tests are all listed here:

https://assets.unilabs.com/m/1bceab4fd5ae78b1/original/Unilabs_UK_20240327_IN-HOUSE_UNILABS_LONDON_IHC_REPERTOIRE.pdf

Contact Details

Address:

Unilabs
Histology Department
24-32 Stephenson Way
London
NW1 2HD

Telephone enquiries: +44 (0)020 7299 4490

E-mail enquiries: UKdiagnostics_1@unilabs.com

Opening hours: from 07:00 – 19:00 Monday to Friday (except bank holidays). Saturday 08:00 – 12:00. Sunday closed.

Protection of Patient Information

All patient information is handled in accordance under the terms of the Data Protection Act (2018).

All staff complete Unilabs statutory mandatory GDPR and Information Governance training online and comply with the departmental quality manual.

Quality Assurance

The laboratory operates daily internal quality control (IQC) procedures and participates in recognised national external quality assurance (EQA) schemes over a twelve-month period:

Histology

- UK NEQAS Specialist Techniques
- UK NEQAS Tissue Diagnostics Scheme
- UK NEQAS Mohs Procedure Scheme
- UK NEQAS Frozen Sections and Mega Blocks

Immunohistochemistry and *In-Situ* Hybridisation Modules

- UK NEQAS General Pathology
- UK NEQAS Breast Pathology (Hormonal Receptors – ER and PR)
- UK NEQAS Breast Pathology HER2 IHC
- UK NEQAS Lymphoid Pathology

Unilabs

- UK NEQAS Alimentary Tract Pathology (GIST)
- UK NEQAS Mismatch Repair (MMR) Proteins
- NordiQC General Pathology

Complaints

Complaints are to be made to Customer Services, telephone number +44 (0)020 7299 4490 or email UKdiagnostics_1@unilabs.com

Histology

Histology is the examination of tissues to identify or exclude morphological abnormalities for the purposes of diagnoses.

The Histology section of the laboratory provides a service to private hospitals and clinics using state of the art equipment. Our laboratory provides a comprehensive range of tests suited for all our clients needs.

Sample Types

Histology specimens are received by the laboratory as below:

- Fixed or fresh
- Formalin fixed tissue samples (including breast; gastrointestinal; skin; urological; bronchial/lung/thoracic; endocrine including thyroid, parathyroid, adrenal; lymphoreticular including lymph nodes, spleen, and bone marrow trephine biopsies, liver; bone and soft tissues; gynaecological; head and neck.

Histology Specimen Container and Additives

Please adhere to the following when sending a sample for histological examination:

- For samples requiring routine histopathology, the patient's tissue sample should be placed inside an appropriately sized specimen container containing 10% formalin immediately after removal to ensure integrity of the tissue and to allow for adequate fixation
- Bouins fixative is required for testicular biopsies
- Michel's Medium can be provided for skin specimens requiring immunofluorescence on request
- The volume of fixative should be at least ten times the volume of the specimen
- For large specimens where this is not possible, the specimen must be at least totally immersed in the formalin
- For bowel resection specimens – please open along the anti-mesenteric border but **DO NOT OPEN THROUGH THE TUMOUR**. The bowel should be cleaned of faecal material before placing into formalin as per above guidelines
- For samples requiring specialist testing – please contact us if you are unsure of any specific fixation requirements are necessary

Immunohistochemistry

Immunohistochemistry is a reflex test which follows a preliminary diagnosis. Most often it is employed to identify proteins within tumour cells which enable precise diagnosis of tumour type, e.g melanoma or specific lymphomas. It may also be used to identify the presence of particular micro-organisms such as HPV and other viruses. Immunohistochemistry is also used to identify the potential effectiveness of targeted chemotherapy, consequently assisting the patient's treatment pathway.

In most cases a provisional report will be initially produced with a supplementary report being added on completion of the extra test.

Unilabs IHC full test repertoire can be found here:

https://assets.unilabs.com/m/1bceab4fd5ae78b1/original/Unilabs_UK_20240327_IN-HOUSE_UNILABS_LONDON_IHC_REPERTOIRE.pdf

Referral Cases/Second Opinion Work

Referral cases and second opinion work are often requested to be sent to Unilabs Histology.

Unilabs Histology are also involved in routinely using specialist testing and in the instances where the Unilabs consultants may require second opinions. These referral sites are audited on a regular basis by Unilabs and are all compliant with the necessary recommended accreditation/s.

The following referral sites Unilabs use are:

Referral Site	Specialist Service
Charring Cross Hospital	Immunofluorescence
Moorfields/UCL Institute of Ophthalmology	Ocular pathology
Charring Cross Hospital	Renal Pathology
Royal Marsden Hospital	Flow cytometry
Royal National Orthopaedic Hospital	Bone/soft tissue specialists
Sarah Cannon Research Institute	Molecular tests
Scottish HPV Reference Laboratory	HPV Genotyping
St Johns Institute of Dermatology	Dermatopathology specialists
TDL-HSL Molecular	HPV subtyping

Turnaround Time

Turnaround times for histology specimens (excluding cases requiring extra fixation, decalcification, referral or other additional investigations) is in accordance with each individual pre-approved client contractual agreement. Unilabs Histology aims to have all results available to meet all individual client contractual agreements as required.

Due to the complex interpretive nature of histopathology specimens these targets may not always be achievable.

Specimen Acceptance/Rejection Criteria

All Histology specimens should be sent with a completed request form. It is essential that the following criteria are fulfilled when completing a sample request form in order for the laboratory to accept the sample and to avoid delays caused by discrepancies:

- Complete the sample request form fully
- Please use the addressographs where possible
- Please print clearly making sure the following is stated:
 - FULL patient name (clearly indicating which name is the forename and surname)
 - Date of birth
 - Hospital number
 - Hospital/clinic name and name of clinician
 - Specimen or sample type
 - Specimen collection date and time
 - Relevant clinical details and patient history
- Insurance details if coming through an insurance provider

Unilabs Histology laboratory protocol is that there must be a minimum of THREE matching identifiers to fulfill adequate specimen acceptance criteria.

Please indicate on the request form (and accompanying dispatch log) if a sample is urgent, along with information of how the clinician is to be contacted with the result and the date the report is required by.

Factors Affecting Specimen Acceptance/Rejection and Overall Report Quality

- Use of correct sample container and fixative type
- Correct amount of fixative proportional to the specimen type and size, including container size
- Fixation time of fresh samples if there is a delay in sending/collection ie: overnight/weekends
- Use of correct request form and completing details to adhere to laboratory acceptance criteria
- Adequately labelled specimen container, including specimen type/site

HIV Positive/High Risk Patients

Please indicate clearly on the request form if a specimen is high risk or suspected to be high risk. Histology samples must be clearly labelled with “Risk of Infection” or “High Risk” hazard stickers if the patient is a known or suspected carrier of HIV, Hepatitis B/C, TB or SARS-CoV-2. The request form must also state the reason for the risk of infection.

All doctors responsible for the care of patients have a duty of care towards other members of staff to ensure this is carried out.

Package and Transportation of Samples

Histology samples must be transported to Unilabs Specimen Reception at:

Unilabs Histology Department

Unilabs

23-32 Stephenson Way
London
NW1 2HD

Packaging

At Unilabs we ask our users to follow the correct handling procedures to ensure:

- The specimens are received and processed appropriately to support a timely diagnosis
- The risk to healthcare associated infections is completely minimized
- To ensure correct labelling and positive patient identification

Most Histology specimens are generally classified and, “Biological Substance, Category B” and should be handled and packaged in accordance with UN3373 regulations. Any sample which is to be transported to Unilabs for diagnostic purposes must adhere to the following instructions for packaging:

1. **Primary Packaging**

A specimen container/pot should be of relevant size to the specimen and contain the appropriate fixative. Ensure that the lid is securely tightened to avoid leakage during transportation

2. **Secondary Packaging**

A biohazard polythene bag provides the secondary packaging layer into which the specimen container is placed. There should be absorbent tissue paper within this bag to soak up any leakages that may arise. This bag needs to be sealed and the corresponding request form placed into the outside pocket of the bag.

3. **Outer Packaging**

This should be the hard outer packaging. For same day collections in London, Unilabs-IHS couriers provide these containers. For specimens being sent using the overnight courier or postal service then the appropriate UN3373 compliant transport containers can be provided by Unilabs-IHS on request.

4. **Specimen Labelling**

It is imperative that all specimen/sample containers and pots are clearly labelled on the container and NOT on the lid. Addressographs must be used where possible.

Transport

Courier Transport

Unilabs employs fulltime couriers who are fully trained in transportation of Category B UN3373 diagnostic specimens, carry medical transport containers and are supplied with emergency spill kits, for which they are also fully trained in how to manage these situations in the unlikely event that a spillage should occur during transport. Local foot couriers visit consultant practices and hospitals within a one-mile radius of the laboratory on request daily to collect specimens and replenish stock supplies. Couriers with a vehicle will collect specimens within central and greater London.

Same Day and Overnight Couriers

For clients throughout the UK, Unilabs subcontract to a reputable medical courier company. These couriers are fully trained in transportation of Category B UN3373 diagnostic specimens, carry medical transport containers and are supplied with emergency spill kits, for which they are also fully trained in how to manage these situations in the unlikely event that a spillage should occur during transport. Our courier suppliers are certified with Quality Management Systems (QMS) ISO14001 and UKAS

ISO9001: 2008 standard.

Postal Packs

Robust UN3373 approved postal packs can be requested from Unilabs and are suitable for laboratories that are sending referral cases, small histology specimens. The postal packs are pre-paid and extremely user-friendly featuring specimens containers and packaging materials. These can be requested by contacting Customer Services: telephone number +44 (0)020 7299 4490 or email UKdiagnostics_1@unilabs.com

For any courier queries and cancellations please contact the Cellular Pathology Secretaries on +44 (0)020 7299 4490 (ask for Secretaries) or email: histology.secretary@unilabs.com

Urgent Samples

For sample requiring urgent results, please indicate this on both the sample request form and corresponding dispatch log, also ensuring that the method of contacting the requesting clinician with the result is stated clearly, along with the date the report is required by.

Results

Histology and IHC results are available on the UnilabsConnect Portal once authorised:

Login page for UnilabsConnect Portal: <https://reports.unilabs.co.uk/cpoe.frontend.p4c/#/login>

Please contact the laboratory with any queries or for additional information.

To request additional histology specimen request forms to be sent with histology samples to the laboratory please contact Cellular Pathology Secretaries on +44 (0)020 7299 4490 (ask for Secretaries) or email: histology.secretary@unilabs.com

Alternatively a histology specimen request form can be printed from here:

Please note: New clients should contact UKdiagnostics_1@unilabs.com to register with us BEFORE sending specimens
